

Capstone Project

Alverse

“Infinite Learning. One Alverse.”

Shubha Gandhi

Agenda – Part 1

Deliverables:

1. Project Scope & Objectives: Define the user problem and value proposition.
2. Market & User Research: Conduct basic competitor or user research using free tools like Google Forms or Canva Personas.
3. Initial Product Concept: Define your product vision, 3–5 features, and preliminary mockups (Canva or Figma optional).
4. Milestones & Resources: Create a simple project plan and timeline using Trello or Notion (both have free tiers).
5. Resource Allocation: List what roles, tools, or data resources are needed.

Product Scope and Objectives

Product Scope:

Develop a SaaS based Collaboration tool for School Learning, Competitive Exam Prep, Corporate upskilling

- **School Learning** enables Paperless Administration for Schools, Upskilling programs for Teachers, Reference study material, Assignment Submission/Evaluation. Parents to get Real-time updates and Progress Dashboard
- For **Competitive Exam Prep** it provides Recorded Lessons, Live Classes, Study material and Adaptive Learning, Mentorship, Career Guidance
- **Corporate upskilling** and Interactive Training Platform

Objective:

Empower learners, educators, and organizations with **smart tools** that simplify administration, enhance engagement, and deliver **personalized learning journeys** – all in one platform.

- Aligned with SSE, CBSE, ISCE, IGSCCE and IB boards (Grade1 to Grade 12)
- Auto Content Generation using AI
- Regional Language support
- Remote Monitoring/Parent Dashboard for parents,
- Online classes (if needed), Announcements, Timetable, Food Menu's (Snacks, Lunch), Bulletin, Attendance Tracker
- Weekly Learner Evaluation mechanism (Gamified Quiz, Personalized Assessments based on learner's learning journey)
- School Registration, Grade specific buckets, Individual Login's for Admins, Teachers, Parents and Learners

Market and User Research

Market Research: Strong Need

- Many Indian schools lack integrated communication platforms.
- No single app supporting syllabus all SSE, CBSE, IGSCSE, IB boards
- Parents often rely on WhatsApp groups, which are messy and unstructured.
- Learning gaps post-COVID demand better tracking of student performance.
- Multilingual Language Support
- **National Education Policy (NEP 2020)** emphasizes holistic learning focusing on critical thinking, conceptual clarity and creativity. Use of Technology in Education, Mother Tongue/Regional Language teaching – this tool aligns well.

User Research:

- **Teachers:** Often overburdened with administrative tasks, not always tech-savvy.
- **Learners:** Wide spectrum – urban private school students vs rural government school students, Homeschoolers
- **Parents:** Increasingly engaged, especially in urban areas; digital adoption is rising.
- **Competitive Exam Prep:** Lack of detailed, personalized progress tracking, mentorship, offline access and inaccurate/outdated content
- **Corporate:** Due to progression in AI, corporates need upskilling

Product Concept

Vision Statement: To create a **unified, AI-powered collaboration platform** that transforms the learning ecosystem by enabling **schools, competitive exam aspirants, and corporates** to seamlessly connect, learn, and grow through personalized, interactive, and accessible digital experiences.

Product Features:

- **AI-Driven Personalization**
 - Auto content generation for lessons, quizzes, and assessments.
 - Adaptive learning paths based on learner performance.
- **Collaboration & Engagement**
 - Real-time dashboards for parents and admins.
 - Gamified weekly evaluations and interactive sessions.
- **Inclusivity & Accessibility**
 - Regional language support.
 - Curriculum alignment with SSE, CBSE, ICSE, IGCSE, IB boards.
- **End-to-End Ecosystem**
 - Paperless school administration.
 - Competitive exam prep with mentorship and career guidance.
 - Corporate training with interactive modules.

Key Differentiators

- AI-powered personalization (adaptive learning paths).
- Gamification for engagement.
- Multi-board curriculum support.
- Regional language accessibility.
- End-to-end ecosystem (school + competitive prep + corporate training).

Figma_UI Alverse
Mockups

Figma Mockups: <https://www.figma.com/make/hsudQsqFJ86ug90SgoRv8v/Alverse-UI-Mockups?node-id=0-1&t=7hZ0LW3ZpGTzLO0R-1>

Market Positioning

Value Proposition

AI-driven personalization, paperless workflows, and integrated collaboration for schools, exam prep, and corporate training.

Discounts and Bundles

- **Annual Commitment:** 15% discount
- **Volume Discounts:**
 - 500+ users → 10% off
 - 1000+ users → 20% off
- **Pilot Offer:** First 3 months at 50% for early adopters

Freemium Strategy

- **Free Tier:** Limited features (basic dashboard, 1 live class/week)
- **Paid Upgrade:** Unlock AI features, unlimited classes, advanced analytics

Pricing Model

Subscription-based (per active user/month) + Add-ons for AI features

Segment	Starter Plan	Growth Plan	Enterprise Plan
Schools	₹150/user/month	₹250/user/month	Custom (large schools)
Exam Prep	₹300/user/month	₹450/user/month	Custom (premium AI)
Corporate	₹400/user/month	₹600/user/month	Custom (compliance)

Add-ons Pricing

- **AI Doubt Bot:** ₹50/user/month
- **Adaptive Learning Pro:** ₹75/user/month
- **Advanced Analytics:** ₹100/user/month
- **Mobile App Access:** ₹50/user/month

Milestones : Project Plan and Timeline

Timeline assumptions

Start: 08 Dec 2025
Duration: 12 weeks (≈90 days)
End: 02 Mar 2026
(last task finishes in Wk 12;
Milestones shown across phases)

Resource Allocation

Resource Allocation by Workstream		
Resource	FTE Count	Role
Frontend Eng.	4	UI for courses, assignments, quizzes, Mentorship booking UI, corporate dashboards
Backend Eng.	4	Tenant model, RBAC, Weekly digests, notifications
Platform Eng.	1	Auth/SSO, notifications framework SMS/Email/WhatsApp Integration
DevOps Eng.	2	CI/CD setup, logging, feature flags
AI/ML Eng.	1	Auto-grading, rubric suggestions, RAG doubt bot
QA	4	smoke tests, regression, performance
UX Design	1	Wireframes, design system, accessibility compliance
Product Manager	1	Roadmap, stakeholder alignment, sprint planning
Content SMEs	2 Part-time	School syllabus, exam prep material, corporate modules
Customer Success	1	Pilot onboarding, data import tools

Alverse Perception Mapping

High Features

Low Price

High Price

Low Features

Position Alverse

- Affordable compared to global enterprise platforms
- High AI Integration (adaptive learning, RAG doubt bot, AI grading)
- Multi-segment coverage (Schools, Exam Prep, Corporate)

X-axis: Pricing (Affordable → Premium)

Y-axis: AI & Personalization (Basic → Advanced)

Competitor Analysis

Platform	Pricing in India (approx)	Key Features	Best For	Pros	Cons
BYJU'S	₹15,000 – ₹80,000/year depending on class & package (sometimes bundled with a tablet)	Recorded video lessons, animations, adaptive learning, live classes in premium	School curriculum (K-12), foundation courses, some competitive prep	Strong brand, engaging content, attractive animations	Very expensive; aggressive sales tactics reported
Toppr	₹30,000 – ₹45,000/year (₹2,500–₹4,000/month)	Adaptive learning, live classes, doubt resolution, quizzes, tests	K-12, board exams (CBSE, ICSE, State Boards)	Personalised study plans, AI-based recommendations	Limited brand reach compared to BYJU'S; fewer live classes
Vedantu	₹2,300 – ₹50,000+ depending on grade & course (crash courses from ₹3,499; long-term NEET/JEE ~₹56k+)	Live interactive classes, quizzes, assignments, mentorship, recordings	K-12, JEE/NEET, CBSE/ICSE board prep	Strong live teaching model, scholarships available, group discounts	Some complaints about missing test series or delayed support
Unacademy	₹20,000 – ₹55,000/year (depends on exam/plan; EMI available)	Live/recorded classes, structured courses, test series, notes, mentorship	Competitive exams (UPSC, SSC, IIT-JEE, NEET, CAT, GATE, etc.)	Strong for govt & competitive exams; India's largest educator base	Not very strong for K-12; pricing & features inconsistent
Khan Academy	Free (global NGO; AI add-on Khanmigo not yet in India)	Recorded video lessons, quizzes, practice, dashboards	K-12 math/science, free supplementary learning	100% free, high quality, aligned with NCERT in India	No live classes; limited for Indian exam prep

Agenda – Part 2

Deliverables:

1. Development Strategy: Define MVP specs and outline how AI or automation will be used.
2. Data Strategy & Analytics Plan: Define success metrics (retention, accuracy, engagement).
3. Evals and Testing: Create a small Eval suite including Goldens, Auto Raters, or LLM-as-a-Judge setups, and explain how Evals differ from test cases.
4. User Testing: Conduct mock usability sessions and visualize findings using Google Sheets or Datawrapper.
5. Iteration Plan: Describe how feedback will drive your next product update

Development Strategy: MVP Specs

Core Value Proposition & Goals: Alverse: One-stop AI-powered learning platform for Education Community

Core Idea: Empowering Education community with intelligent, personalized, and collaborative learning tools – all in one place.

What We Deliver:

- **Personalized Learning Journeys** – AI-driven recommendations, adaptive study plans, and performance tracking tailored to each learner's needs.
- **Collaborative Ecosystem** – Connects students, teachers, and parents for seamless communication, resource sharing, and academic support.
- **Smart Content & Tools** – AI-powered summaries, quiz generation, and doubt-solving to make learning efficient and engaging.
- **Time & Effort Savings** – Reduces study time by 30% with AI-driven recommendations
- **Scalable & Inclusive** – Supports diverse learning styles, multiple languages, and accessibility need:

Core Personas

- **Student/Learner** (K-12, exam aspirants, corporate employees)
- **Teacher/Instructor** (school teachers, exam mentors, corporate trainers)
- **Parent/Guardian** (K-12)
- **School Admin** (Principal/office admin)
- **Program Manager/L&D** (Corporate)
- **Mentor/Counselor** (exam prep, career guidance)
- **Content Author** (SMEs creating modules/quizzes)
- **System Admin** (IT/tenant admin)

MVP Scope by Segment

Segment	Key Modules (MVP)	User Stories
School Learning	Paperless Administration: Digital admissions, Attendance management(QR/NFC/Face-ID optional in v2), Timetable & announcements, Fee invoicing & payment (Razorpay/Stripe integration in v2) Teacher Upskilling: Microlearning courses ,Internal certification & badge issuance, AI-generated lesson improvement tips from class analytics Learning Delivery: Reference study material, Assignments: creation, submission, deadline reminders, Auto-grading for objective questions; rubric-based semi-auto for subjective Parents: Real-time updates (attendance, assignments, announcements), Progress dashboard (marks, trends, suggested actions)	- As a student, I can submit assignments and view feedback. - As a student, I receive nudges when I miss deadlines or show performance dips. - As a teacher, I can create assignments/quizzes and auto-grade MCQs. - As a teacher, I receive AI suggestions to improve lesson content, pace - As a parent, I can see attendance/assignment status. - As a school admin, I can publish announcements across classes. - As a school admin, I can manage classroom rosters and timetables.
Competitive Exam Prep	Content Delivery: Recorded lessons (VOD) & Live classes (Zoom/Teams), Study material (organized by syllabus/topic), Adaptive practice (item bank + difficulty tuning) Mentorship & Guidance: 1:1 mentorship booking (calendar integration), AI-powered doubt resolution (chat with retrieval over syllabus), Career guidance milestones and recommended paths Assessment & Analytics: Topic-wise quizzes, full-length mocks, AI-driven weak-area identification & personalized study plan, Leaderboards, streaks, badges	- As a learner, I get adaptive practice set based on past performance. - As a learner, I can ask doubts and get instant AI answers with sources. - As a mentor, I view a learner’s analytics before sessions. - As a learner, I can book mentorship slots and receive reminders. - As a content author, I upload lessons with topic tagging. - As a learner, I receive weekly personalized study plans. - As a learner, I see leaderboards and earn badges. - As a system admin, I set access rights for mentors/authors.
Corporate Upskilling	Learning Experience: Interactive modules (video, SCORM/xAPI in v2), Knowledge checks and scenario-based quizzes, Discussion forums & cohort chat Programs & Compliance: Pathways (mandatory/elective courses), Completion tracking & certificates, Audit-ready reports Skills & Insights: Skills matrix (role → competencies), AI gap analysis & course recommendations, Manager dashboard: team progress and alerts	- As an employee, I receive AI recommendations to close skill gaps. - As a trainer, I create modules/quizzes; auto-grade objective items. - As an L&D manager, I assign programs and view completion reports. - As an manager, I get alerts on overdue mandatory trainings. - As an employee, I earn certificates upon completion. - As a system admin, I manage organizational units and roles.

AI & Automation in MVP : Core AI Capabilities (Cross-Segment)

Adaptive Learning Engine

- **Inputs:** learner performance, difficulty of items, time-on-task | **Outputs:** next-best questions, personalized study plans
- **Methods:** Bayesian estimation/IRT (v2), heuristic + ML baseline in MVP

AI Grading & Feedback

- **Objective questions:** Auto-grading with immediate feedback | **Subjective responses:** LLM-assisted Rubric Scoring (teacher final approval).
- **Assignment feedback:** AI suggests improvements, highlights common errors.

AI Content Support

- Generate question variations, summaries, and flashcards from uploaded material.
- Hallucination Guardrails: citations to source content, confidence flags.

AI Doubt Resolution (Chat)

- Retrieval-Augmented Generation (RAG) over course materials & syllabus.
- Learners ask questions; answers include references and difficulty-adjusted examples.
- Safety: profanity filter, academic integrity checks.

Automation

- **Notifications & nudges:** Assignment deadlines, attendance alerts, progress dips.
- **Workflow automation:** admission status updates, certificate issuance.
- **Smart scheduling:** suggest mentorship/training slots based on availability.

Parents & Manager Insights

- Auto-generated weekly digests: key metrics, trends, recommended actions.
- Risk alerts: absenteeism spikes, low-engagement students/teams.

Acceptance Criteria | Platform Architecture | Data Model

Acceptance Criteria (Examples)

Assignment Creation (Teacher)

- Given a teacher with course access, when they create an assignment with MCQs/short answers, then
 - Students can view it in their course feed.
 - MCQs auto-grade on submission; short answers generate AI rubric suggestions.
 - Teacher can override AI suggestions and publish final grades.

Adaptive Practice (Learner)

- After 20 questions, system identifies top 3 weak topics with confidence score.
- Next session recommended set contains ≥60% questions from weak topics.
- Improvement trend visible after ≥50 questions.

Parents Dashboard

- Shows attendance (weekly), assignment completion rate, last 5 grades.
- Sends weekly digest every Sunday 6 PM IST.

Platform Architecture (MVP)

Frontend: React/Next.js (web), responsive PWA; mobile app in v2.

Backend: Node.js/Express or .NET Core; GraphQL/REST APIs.

Data: PostgreSQL (transactional), Elasticsearch/Weaviate for semantic search (v2), Redis for caching.

AI Layer:

- Hosted LLM (Azure OpenAI/other compliant provider).
- Embeddings for RAG; vector store (pgvector or dedicated).
- Model registry for versions and prompts. **Media:** CDN + object storage (Azure Blob/S3).

Streaming: Integrations (Teams/Zoom/Meet) for live classes.

Multi-tenancy: Tenant isolation via schema + RBAC.

Security: OAuth2/OIDC (Azure AD/Google), JWT, SSO.

Observability: Centralized logging, metrics, feature flags (LaunchDarkly in v2).

Scalability: Containerized (Docker), K8s (AKS/EKS) in v2; start with managed PaaS.

Data Model (High-level, MVP)

User	id, role, tenantId, profile, guardianLink
Organization/Tenant	id, type: school/coaching/corporate
Class/Cohort	id, orgId, schedule, roster
Course/Module	id, syllabus map, tags, media refs
Content Item	id, type: video/pdf/quiz, topic tags
Assignment/Assessment	id, courseId, rubric, dueDate
Submission	id, userId, assignmentId, grade, feedback
Live Session	id, schedule, meetingLink, attendance
Mentorship Booking	id, mentorId, learnerId, timeslot
Events/Activity	id, type, timestamp; for analytics
Payments	MVP optional; v2
Certificates	id, userId, courseId, issuedAt

Feature Prioritization Analytics and KPI

Feature Prioritization	Must-have (MVP)	Nice-to-have (v2)
	Multi-tenant setup, RBAC	Face attendance, payment gateway, LMS SCORM/xAPI
	Assignments, quizzes, auto-grading for objective items	IRT-based adaptive testing, proctoring
	Recorded lessons hosting + live class integration	Content marketplace
	RAG-based doubt bot with citations	Gamification advanced (quests, cohorts)
	Adaptive practice (baseline)	Advanced plagiarism & code autograding for STEM
	Parents dashboard + weekly digests	Mobile apps (Android/iOS)
	Teacher upskilling micro-courses	
	Mentorship scheduling	
	Basic analytics dashboards	

Area	Metric	Definition	Baseline (Month 1)	Target (Day 60)	Stretch (Day 90)
School	Assignment completion rate	% of assigned tasks submitted by due date	75%	88%	92%
	Parent engagement (digest open rate)	Unique opens ÷ delivered parent digest emails	30%	40%	45%+
Exam Prep	Practice question throughput	# questions attempted per learner per week	120/wk	200/wk	250+/wk
	Weak-area improvement (Δ/week)	Increase in topic-level accuracy per week (pp = percentage points)	+3 pp/wk	+5 pp/wk	+6–8 pp/wk
Corporate Upskilling	Program completion rate	% employees who finish assigned tracks	65%	80%	85–90%
	Skills gap closure (pre/post)	Δ in assessment scores from pre to post	+12 pp	+18 pp	+22–25 pp
Platform level	DAU/MAU (stickiness)	Daily active ÷ monthly active users	0.28	0.35	0.40+
	Availability (SLO)	Uptime over rolling month (<i>error budget</i> ≈ <i>allowed downtime</i>)	99.9% (~43–45 min/mo)	99.95% (~22 min/mo)	99.99% (~4.3–4.5 min/mo)

MVP Phases | Metrics | User Testing | Iteration

MVP Phase	Timeline	Success Metrics (targets)	Key User Testing Activities	Iteration Loops (cadence & actions)	Owners
Phase 0: Skeleton Site & Manual Curation	Weeks 0–2	Discovery & Reliability: DAU/MAU baseline; Activation ≥ 50% ; Search success ≥ 65% ; Availability ≥ 99.9% ; p95 latency ≤ 2.5s	Internal smoke (PM+Eng); 5 user interviews (teacher/mentor/manager); Task success: find app → run sandbox; Clickstream funnel instrumentation	Weekly micro-fixes on nav/search; tighten content cards; improve empty states; Bug bash Day 10 ; update glossary & help tips	PM, Eng, Design
Phase 1: Sandbox Trials, Reviews, Creator Submission	Weeks 3–6	Engagement & Creation: Activation ≥ 65% ; Avg session ≥ 8 min ; Reported issue rate < 2% ; Goldens accuracy ≥ 90%	Moderated usability (8–10 users/segment); A/B copy on CTAs; Creator flow tests (template → publish); Eval suite v0.1 (Goldens, Auto Rater smoke)	Weekly UX fixes ; Add 10–15 Goldens for top failure modes; Content moderation SLA dry-run; Design review each Friday	PM, Design, Creator Ops, QA
Phase 2: Studio Templates & Workspace for Teams	Weeks 7–10	Adoption & Quality: Team trials ≥ 10 ; Repeat usage ≥ 15% ; Evaluation completion ≥ 70% ; Auto Rater pass ≥ 75% ; LLM-Judge median ≥ 4.2 ; Guardrail violation rate < 3%	3 pilot teams (School/Exam/Corporate); Workspace journey tests Judge rubric validation ; Webhook tests (Teams/Slack)	Bi-weekly feature sprints ; add reference rationales for weak topics; Expand Auto Rater rules ; Guardrail tuning (blocked terms, rate limits)	PM, Applied AI, Eng, SRE
Phase 3: Analytics, Trust Badges, Stabilization	Weeks 11–12	Scale & Reliability: DAU/MAU ≥ 0.35 ; Goldens ≥ 95% ; Auto avg ≥ 4.2/5 ; Judge fail ≤ 15% ; Availability ≥ 99.95% ; p95 latency ≤ 2.0s ; NPS ≥ +35	Dashboard usability (exec & ops); Badge placement A/B ; Perception survey (trust, clarity); Perf smoke (peak hours); Issue triage reports	Weekly ops review ; RAG playbook for red metrics; Finalize publish criteria ; Harden moderation workflows ; Release readiness checklist	PM, Data/Analytics, SRE, Design
Post-MVP: Hardening & Growth	Weeks 13+	Growth: Activation ≥ 75% ; DAU/MAU ≥ 0.40 ; Conversion to provider ≥ 15% ; Platform error rate < 0.5%	Longitudinal cohorts ; Focus groups for creators; Load testing	Monthly retro & roadmap updates; Cohort-based experiments ; Add payments/marketplace	Leadership, PM, Eng

Evals Examples

Goldens

Use Goldens when the input → output can be **specified precisely** (e.g., extraction, classification, math, policy checks).

Metric: Accuracy / Exact Match / Structured Match

Example: PII Redaction (Platform GuardRail)

Where to use:

School: Policy-Compliant feedback format

Exam Prep: Answer key for numeric problems

Corporate: Compliance text classifier (Pass/Fail)

Auto Raters

Use Auto Raters when outputs are **open-text but evaluable with rules**: regex, semantic similarity, BLEU/ROUGE, JSON schema validation, or a small reference set.

Example: Summary Quality (Exam Prep + School)

Where to use:

School: digest subject lines (click-through proxy)

Exam Prep: short rationales quality checks

Corporate: lesson summaries adherence to template

LLM as a Judge

Use an independent, neutral model to **evaluate the candidate output against a Rubric**. Essential for tasks like helpfulness, coherence, factuality, safety, tone.

Example: Mentor Chat helpfulness (Exam Prep / Corporate)

Where to use:

Expected judge behavior:

- Scores each criterion 1–5; overall is average
- You set a gate: overall ≥ 4.0 passes

Bias controls:

- Use reference free judging (Rubric only) or reference aware
- Randomize example order; enforce self consistency (multiple judge calls; median)
- Log rationales for audit but don't train on them (to avoid leakage)

Good Practice

- **Sampling & stratification:** 30–50 examples per domain (School/Exam/Corporate), balanced by difficulty.
- **Drift Detection:** re run weekly; flag $> 10\%$ delta in pass rates.
- **Hallucination Traps:** include unanswerable items; judge must recommend “insufficient data” (safety).
- **Data Privacy:** redact PII; store only hashes of prompts/responses when feasible.
- **Gating Policy:** Goldens $\geq 95\%$, Auto Rater Pass $\geq 80\%$, Judge Median ≥ 4.2 and Fail $\leq 15\%$
- **Versioning:** tag evals v0.x; freeze when comparing models or prompts.

Evals : Roll-up Score

School Goldens (Deterministic Pass/Fail)

- Total items: 260
- Pass: 240 → Accuracy: $240/260 = 92.3\%$
- Latency: p95 = 1.9s, p99 = 3.6s
- Top failures: date normalization (35%), rubric formatting (28%)

Exam Prep Auto Raters (Rule + Similarity)

- Gate: score ≥ 4.0
- Items: 180 → Pass: 141 → Pass rate 78.3%
- Avg score: 4.0
- Rule hits: bullet_count 92%, length_ok 85%, numeric_fact 71%
- Similarity (cosine to reference): mean 0.73 (gate 0.70)

Corporate LLM-Judge (Rubric Scoring)

- Items: 120 dialogs
- Gate: overall ≥ 4.2
- Median overall: 4.5; Mean: 4.46
- Fail rate: 10%
- Inter-judge agreement (3 calls): 87% same verdict
- Weakest criterion: Actionability (avg 4.1)

Roll-up score

$\text{EvalScore} = 0.4 \times \text{GoldensAcc} + 0.3 \times \text{AutoAvg}/5 + 0.3 \times \text{JudgeMedian}/5$

Example (Exam Prep): GoldensAcc = 0.956; AutoAvg = 4.0 → 0.8 normalized; Judge Median = 4.3 → 0.86 normalized

$\text{EvalScore} = 0.4(0.956) + 0.3(0.8) + 0.3(0.86) \approx \mathbf{0.884}$

User Testing

MVP Phase	Timeline	Success Metrics (targets)	Key User Testing Activities
Phase 0: Skeleton Site	Weeks 0–2	Discovery & Reliability: DAU/MAU baseline; Activation ≥ 50% ; Search success ≥ 65% ; Availability ≥ 99.9% ; p95 latency ≤ 2.5s	Internal smoke (PM+Eng); 5 User interviews (teacher/mentor/manager); Task success: find app → run sandbox;
Phase 1: Sandbox Trials, Reviews,	Weeks 3–6	Engagement & Creation: Activation ≥ 65% ; Avg session ≥ 8 min ; Reported issue rate < 2% ; Goldens accuracy ≥ 90%	Moderated usability (8–10 users/segment); A/B copy on CTAs; Creator flow tests (template → publish); Eval suite v0.1 (Goldens, Auto Rater smoke)
Phase 2: Workspace for Teams	Weeks 7–10	Adoption & Quality: Team trials ≥ 10 ; Repeat usage ≥ 15% ; Evaluation completion ≥ 70% ; Auto Rater pass ≥ 75% ; LLM-Judge median ≥ 4.2 ; Guardrail violation rate < 3%	3 pilot teams (School/Exam/Corporate); Workspace journey tests; Judge rubric validation ; Webhook tests (Teams/Slack)
Phase 3: Analytics, Trust Badges,	Weeks 11–12	Scale & Reliability: DAU/MAU ≥ 0.35 ; Goldens ≥ 95% ; NPS ≥ +35 ; Auto avg ≥ 4.2/5 ; Judge fail ≤ 15% ; Availability ≥ 99.95% ; p95 latency ≤ 2.0s ;	Dashboard usability (exec & ops); Badge placement A/B ; Perception survey (trust, clarity); Perf smoke (peak hours); Issue triage reports
Post-MVP: Hardening & Growth	Weeks 13+	Growth: Activation ≥ 75% ; DAU/MAU ≥ 0.40 ; Conversion to provider ≥ 15% ; Platform error rate < 0.5%	Longitudinal cohorts ; Focus groups for creators; Load testing

Success Rates per Persona

Insights

Students highest success rate (92%) and satisfaction (4.5)
Parents struggled most (80% success, 3.8 satisfaction) → UI simplification needed
Exam Learners/Corporate Employees performed well, took longer time on tasks

Heatmap: Error-Prone Tasks (by Persona)

Recommendations for MVP Hardening Phase (Based on above Heat Map)

Navigation & Guidance (Parents): Prioritize card-based dashboard with guided tours, contextual tooltips

Live Class Entry (Parents & Learners): Add pre-session checks, device compatibility prompts, fallback join link

Mentorship Booking (Exam Learners): Improve calendar visibility, mentor availability cues, confirmation/reminders

Task Flows: Reduce steps, clarify labels and roles, and provide inline help/error recovery

Agenda – Part 3

- Presentation on Product Strategy and Analytics : Completed in session
- Develop a Comprehensive Report
- Peer Review and Feedback Session : Completed in session
- Evaluating Project Success and Lessons Learnt
- Apply Feedback for Final Refinement
- Preparing for Real World Implementation

Evaluating Project Success and Lessons Learnt

Project Success Criteria

Delivery Metrics:

- MVP completed within 90 days
- Core features implemented (School Learning, Exam Prep, Corporate Upskilling)

Quality Metrics:

- Usability scores ≥ 4.0
- Error rate $\leq 10\%$ in critical flows

Adoption Metrics:

- Pilot engagement (schools, exam institutes, corporates)
- DAU/MAU ratio and retention

Business Impact:

- Reduction in admin overhead for schools
- Improved learner performance (adaptive learning outcomes)

AI Performance:

- Accuracy of auto-grading and doubt resolution
- Adaptive engine effectiveness

Lesson Learnt

What Worked Well

- Early stakeholder alignment and clear MVP scope
- AI-assisted grading reduced teacher workload significantly
- RAG-based doubt bot improved learner engagement

Challenges

- Parent dashboard navigation complexity → redesign needed
- Live class onboarding friction for non-tech-savvy users
- Corporate compliance reporting took longer than expected

Recommendations for Future

- Invest in UX research earlier for high-friction personas
- Build scalable AI pipelines for content tagging and personalization
- Introduce mobile-first design for better

Feedback for Final Refinement

1. Navigation & UI

- Parent dashboard feels cluttered → Simplify layout with card-based design.
- Add tooltips and guided walkthrough for first-time users.

2. Performance

- Live class join time slightly high → Optimize video streaming and pre-check device compatibility.
- Reduce page load time for dashboards (<2s target).

3. AI Features

- Doubt bot accuracy good but needs clearer source citations.
- Adaptive practice recommendations should highlight weak topics more prominently.

4. Accessibility

- Increase font contrast for better readability.
- Ensure WCAG compliance for color usage and keyboard navigation.

5. Notifications

- Add option for parents to choose preferred channel (SMS/WhatsApp/email).
- Include progress digest in multiple languages for regional schools.

6. Corporate Module

- Training completion flow needs a visible progress bar.
- Add “Resume where you left off” feature for long courses.

Thank You
